

Bedrock Domain Scenario: Customer Engagement

CONFIDENTIAL - FOR INTERNAL USE BY BADGE CANDIDATES ONLY

Communities Design

Instructions

Presentation Time: 30 minutes

Q & A: 20 minutes

Immediate Feedback: 10 minutes

For the hypothetical scenario described below, you will need to document and present your proposed solution design followed by a Q&A session with a judge. As part of the solution you should:

- Describe an appropriate solution that meets the business requirements
- Deliver all of the required deliverables as part of that presentation
- Address trade-offs and considerations for your solution options

You should target the presentation to the CIO along with the VP of Marketing, Service and HR. In cases where requirements are not explicitly stated for the scenario, you should use your best judgment and make appropriate assumptions based on the information provided and what you know about Bedrock Enterprises (BE). You should indicate any assumptions that were made when designing the proposed solution. You will not have an opportunity to ask clarifying questions related to the hypothetical scenario.

You will be evaluated on your ability to assess the scenario requirements, design a solution, communicate the proposed architecture, and justify the design decisions.

The executive will evaluate your solution in the following areas:

Objective	Weighting
Licensing, User Volume	10
Templates & User Experience	15
Customization	5
Sharing	20
Collaboration	15
Integration	10
Community Management and Analytics	10
Mobile	5
Single / Social Sign on, User Provisioning	10

Expected Deliverables

- Please use template provided to guide your presentation. You may add slides if required to further explain your solution. The solution should not have more than 5 slides.
- Demonstrate working knowledge of product options and features as it pertains to licensing, volume, configuration, and customization.
- Provide a build for functionality as per each requirement. Will be noted in this document (inline).

Background:

Bedrock Enterprises (BE), incorporated in 1903, is a global digital industrial company. The company's products and services range from information technology solutions to medical imaging, financing and industrial products. The company's segments include Bedrock Financial (BF), Bedrock Healthcare (BH) and Bedrock Transportation Services (BTS).

Actors:

- BF's total **Client** base is approximately 4 Million. Each client has an average of 10 accounts and are expected to access their account information at least once a week. 500K of their top clients access their account information on a daily basis.
- A network of over 5,000 **External Advisors (Advisors)**, each owning a Book of Business comprising between 100 and 1,000 Clients. Advisors may be sole proprietor or part of a financial advisor group.
- **District Managers (DMs)** are internal employees that recruit new Advisors and support existing Advisors with strategies to increase their book of business. Each DM has an average of 50 Advisors
- BF has 8,000 additional **Internal Employees** that are not involved in Client or Advisor servicing

Current Landscape:

- Corporate website built on Adobe Experience Management (AEM) for marketing information on BF products and services. AEM will remain as the unauthenticated corporate website.
- Advisors currently use a custom J2EE site to access FAQs and Policies. BF would like to retire this system.
- BF Employees use Sharepoint to manages FAQs which are published to the J2EE site. BF would like to retire this system.
- BF Core banking system containing Advisor data along with Client's and their current financial holdings (portfolio). Data is available via both ESB or ETL integrations.

Current Challenges:

- Clients holdings are only available from monthly statements or inquiries to their Advisors
- Existing on-boarding of Advisors is manual and outdated
- Advisor are dissatisfied with the information available on how to work with BF internal. The FAQs are not searchable and constantly out-of-date

Due to a recent compliance deregulation in the financial advisory space, Bedrock Financial is looking to build an online Community which will provide their Clients access to view their status of their financial holdings at anytime, get smarter about investing and collaborate with their Advisors and other Clients on investing strategy. Success will be measured by Adoption, increase in Client satisfaction and retention.

Business Process Requirements

1. Provide an online experience for customers
2. Allow for online collaboration between Clients and Advisors both on investing strategy and within the context of an individual holdings
3. Ability for Clients to create service requests for BF Service Agents to make changes to their accounts. They should be able to track the progress of their own service requests as they are handled towards completion.
4. FAQs can be made available to any combination of Internal, Advisors or Clients
5. The Client community branding and styling should be aligned to the BR branding. The community footer should remain consistent with any changes made to the footer on the public website
6. BF would like to provide a mobile experience for their Clients, Advisors and internal users.
7. Clients will authenticate using either Salesforce credentials or social sign-on from Facebook, Twitter or LinkedIn
8. Existing Clients should be able to self-register to the Community
9. Clients should be able to search for answers to Frequently Asked Questions
10. Clients are only able to see their own portfolio of holdings
11. Clients should be able to see what holdings are most active and be able to mark as favorites
12. DMs will be able to help clients get faster responses to their questions when it is beyond the scope of a thread or requires personal attention
13. BF would like a way to group related FAQs so Clients can navigate to them from within the Community
14. Clients can see other Clients Profiles but not their holdings
15. Provide an online experience for Advisors
16. Individual Advisors should only be able to collaborate on the Client portfolio/holdings from their own Book of Business
17. Managers from an advisory firm should have access to view all Clients managed by Advisors in their firm
18. Advisors should be able to collaborate with other Advisors
19. Provide a motivation mechanism to encourage Advisors to leverage the collaboration platform thus increasing client adoption
20. Managers from an advisory firm can create/remove Advisor staff
21. Advisors can report on the most active Clients within their Book of Business
22. DMs and other Internal staff will authenticate via an Azure ADFS and will be auto provisioned

23. DMs should only be able to see Clients from the Advisors they manage
24. DMs should be able to moderate collaboration between Advisors
25. DMs should be able to understand which Advisors are the most active in the Community
26. DMs can register new Advisors and Advisory Firms
27. While not in scope of this project, HR would like a recommendation for how all employees (including those not involved in client servicing) could engage more easily with HR to get their questions around Payroll and Benefits answered.
28. Ability for management to analyze adoption rate to assess success and direct investments to enhance the platform
29. The CSO is understandably concerned about this new initiative. She would like advice on what processes and procedures could be put in place to assess data exposure risk. She would like to ensure the project team is following best practices and doesn't inadvertently introduce a configuration change that could increase portfolio visibility or other unintended data
30. VP of Marketing IT would like to understand what options are available for exposing the KB from within the unauthenticated Corp Website

Expectations

- Design an appropriate solution that meets the business requirements
- Clearly articulate sharing design for each of the actors and respective records
- Clearly articulate Identity Management and how access will be controlled
- Describe the appropriate uses of Communities in relates to customer engagement
- Describe the various uses of Community collaboration
- Address trade-offs and considerations.
